PROPOSITION 65 COMPLIANCE STATEMENT

This statement confirms that Switchcraft is aware of the requirements of California Proposition 65 (the Safe Drinking Water and Toxic Enforcement Act of 1986). It is our intention to comply with the requirements of this regulation as it applies to notification when listed chemicals are present in significant amounts within our products.

Chemicals known to the State of California to cause cancer or reproductive toxicity, listed by the State of California Environmental Protection Agency Office of Environmental Health and Hazard Assessment, in accordance with the Safe Drinking Water and Toxic Enforcement Act of 1986 (Proposition 65), dated 7 July 2017, are not intentionally or knowingly added to Switchcraft products during manufacture unless otherwise stated on the following page(s). We will continue to work with our suppliers to identify any listed chemicals contained in the materials procured for use in manufacturing Switchcraft products. This statement will be updated immediately if any additional listed chemical use is determined.

Note: None of our materials were analyzed for content as we are relying on the material supplier for Certifications and/or notification and available MSDS information.

Exceptions are noted on the following page(s)

Proposition 65 listed chemicals contained in Switchcraft and/or Conxall products

Beryllium and beryllium compounds - Some Switchcraft and Conxall connector and audio jack products include components manufactured from Beryllium Copper material. Specific product information is available on request.

Cadmium and cadmium compounds - Switchcraft offers many non-RoHS compliant products primarily in the jack, plug and switch families to meet customer requirements for corrosion protection. These products do contain Cadmium plated components. In most cases Switchcraft offers RoHS compliant alternates that do not contain the Cadmium plated components. Specific product information is available on request.

-Some Switchcraft switch products contain Cadmium Oxide in the electrical contacts (RoHS exemption 8b). Specific product information is available on request.

Chloroprene – Some Switchcraft and Conxall connector products include o-rings, gaskets and/or seals manufactured from polychloroprene (Neoprene), which is the polymer of chloroprene. Specific product information is available on request.

Di(2-ethylhexyl)phthalate (DEHP) - The following Switchcraft products include PVC components that contain Bis (2-ethylhexyl)phthalate (DEHP), EC No. 204-211-0, CAS No. 117-81-7. PVC overmold material, PVC cable jackets and PVC flex relief components may contain up to 45 percent DEHP.

- 250HR series 2.5 mm overmolded cable assemblies (includes custom part numbers)
- 251HR series 2.5 mm overmolded cable assemblies (includes custom part numbers)
- 32HR series 3.5 mm overmolded cable assemblies (includes custom part numbers)
- 33HR series 3.5 mm overmolded cable assemblies (includes custom part numbers)
- 35HR series 3.5 mm overmolded cable assemblies (includes custom part numbers)
- 36HR series 3.5 mm overmolded cable assemblies (includes custom part numbers)
- AAA QG Connector Series
- R*FZ and R*MZ QG Connector Series

Lead and Lead Compounds – Many Switchcraft and Conxall products include components machined from 360 alloy brass, which may contain up to 3% lead as an alloying element RoHS exemption 6c allows up to 4% lead as an alloying element in copper alloys).

Nickel – Many Switchcraft and Conxall products include components that are nickel plated. Specific product information is available on request.

Tetrafluoroethylene - Switchcraft Video Jack products and some custom cable assemblies use PTFE components. PTFE is a polymer of Tetrafluoroethylene. Specific product information is available on request.

Vinyl Chloride – Many Switchcraft and Conxall products; cables, cable assemblies, connector overmolds, etc. include components manufactured from polyvinyl chloride (PVC) which is a polymer of vinyl chloride. Specific product information is available on request.

Bisphenol A (BPA) - Some Switchcraft Power Jack and Audio Jack products include components molded from polycarbonate materials. Bisphenol A (BPA) may be used during polycarbonate material production but the majority of the substance is consumed during the process. The molded components may contain trace amounts, less than the reportable limit of 0.1% weight by weight, of residual BPA. Switchcraft and Conxall do not use BPA as part of the molding process.
